

**AMENDMENT TO THE CLAIMS**

Please amend the claims without prejudice, without admission, without surrender of subject matter, and without any intention of creating any estoppel as to equivalents, as follows.

In the Claims:

Claim 1 (currently amended)

1. A dispenser for controlled release of volatile substances, comprising

a reservoir (1) covered on its top face (2) and on its bottom face (3) by a first control element (6), said reservoir containing at least one volatile substance (4),

a first control element (6), which ~~is pressure sensitivity adhesive and~~ exerts a control function that ~~which~~ is dependent on the physical properties of the at least one volatile substance (4) and the material properties of the constituents of the first control element (6), said control element (6) is fully covered by a second control element (7) and

a second control element (7) which exerts a control function that ~~which~~ is independent of the physical properties of the at least one volatile substance (4) and the material properties of the constituents of the first control element (6).

Claim 2 (original)

2. The dispenser of claim 1, characterized in that the first control element (6) is disposed between the reservoir (1) and the second control element (7).

Claim 3 (previously presented)

3. The dispenser of claim 1, characterized in that the second control element (7) is a material comprising gaps (8) which is impermeable to the at least one volatile substance.

Claim 4 (previously presented)

4. The dispenser of claim 1, characterized in that the reservoir (1) is a cavity.

Claim 5 (previously presented)

5. The dispenser of claim 1, characterized in that the reservoir (1) comprises a carrier material (5) which is capable of accommodating a volatile substance (4).

Claim 6 (previously presented)

6. The dispenser of claim 1, characterized in that the reservoir (1) is flat and has a top face (2) and a bottom face (3).

Claim 7 (previously presented)

7. The dispenser of claim 1, characterized in that the carrier material (5) comprises a natural or synthetic polymer.

Claim 8 (previously presented)

8. The dispenser of claim 1, characterized in that the carrier material (5) is in fiber, woven, nonwoven, foam, powder, gel, solution or granule form.

Claim 9 (previously presented)

9. The dispenser of claim 1, characterized in that the first control element (6) is composed of a material which is permeable to the at least one volatile substance.

Claim 10 (previously presented)

10. The dispenser of claim 1, characterized in that the material which is permeable to the at least one volatile substance comprises a natural or synthetic polymer or a blend thereof.

Claim 11 (previously presented)

11. The dispenser of claim 1, characterized in that the second control element (7) is in the form of a film and has a thickness of between 50  $\mu\text{m}$  and 2.5 mm.

Claim 12 (previously presented)

12. The dispenser of claim 1, characterized in that the gaps (8) in the second control element (7) are tubular, spherical or irregular.

Claim 13 (previously presented)

13. The dispenser of claim 1, characterized in that the at least one volatile substance (4) is an active chemical and/or biological substance.

Claim 14 (previously presented)

14. The dispenser of claim 1, characterized in that the at least one volatile substance (4) is a fragrance or fragrance mixture with attractive or repellent action on insects, fish, amphibians, reptiles, birds or mammals.

Claim 15 (cancelled)

Claim 16 (currently amended)

16. ~~The use of a dispenser of claim 1 for~~ A method of releasing a volatile substance (4) to a gaseous, liquid or solid environment which comprises positioning the dispenser of claim 1 in the desired environment.

Claim 17 (currently amended)

17. ~~The use of a dispenser of claim 1 for releasing~~ The method  
of claim 16 wherein the release of a volatile substance (4)  
is over a period of at least one hour.
